

To standardize Component IDs and to conserve the VIN# as the *primary means of identifying RV fluid samples*, JG Lubricant Services has established the following “Preferred Component ID” structures. NRVIA inspectors are instructed to begin identifying fluid samples by using the Component ID structures as shown below. Inspectors are requested to begin using these Component ID structures beginning September 1, 2017.

Note: *Secondary Component IDs should reflect the RV model year, make (mfr) and model.*

RV Component (Sampled Component)	Preferred Component ID Structure
Engine Oil	VIN# - EO
Engine Coolant	VIN# - EC
Transmission Fluid	VIN# - TF
Generator Oil	VIN# - GO
Generator Coolant	VIN# - GC
Differential (Rear End)	VIN# - DF
Power Steering Fluid	VIN# - PS
Hydraulic System	VIN# - HY
Aqua Hot Coolant	VIN# - AH
